

Amazon Private Brands Chemicals Policy Update – Public Communication

Background and Overview

Amazon created its Formulated Goods Chemicals Policy in 2018 as part of our commitment to embedding sustainability into Amazon-branded products. As part of Amazon’s continued quest to provide customers with products that are better for their families and for the planet, the policy was designed to aid us in proactively managing the chemicals used in Amazon Private Brand formulated products, including baby, cleaning, personal care, and beauty products in the U.S. and Europe. A Restricted Substance List (RSL) was created for these products and it includes extensive list of restricted chemicals.

As Amazon Private Brands continues to evolve on our sustainability journey, we are committed to evaluating new information and revising our policies accordingly. As a result, we have recently updated our formulated goods RSL to include additional 708 chemicals. In addition to developing internal procedures for this update, we provided in-depth guidance for our suppliers to ensure RSL compliance.

Update Process and Product Compliance

To update our policy and RSL, Amazon Private Brands evaluated actions to be taken within our policy as well as a list of chemicals to add to the RSL. To do this, we considered customer feedback, looked at what NGOs and other groups were calling out as chemicals of concern in this product space, and considered best available science. In addition, the perception of customers and suppliers, the availability of suitable alternatives, and business factors were also considered to reach the final list of chemicals included on the updated list. In the future, to further evaluate potential chemicals of concern, we will also use the GreenScreen® for Safer Chemicals methodology to assess a chemical’s hazard profile.

Ongoing Efforts

In addition to the RSL updates, Amazon Private Brands created a priority chemical list for our supply chain partners. This list will be used to communicate to our suppliers about chemicals that may be added to the next iteration of the formulated goods RSL, at minimum, to enable them to start reformulating early.

Amazon Chemicals Policy: Restricted Substance List

We seek to avoid intentional addition of following chemicals in our Amazon Private Brand Baby, Cleaning, Personal Care, and Beauty formulated products in the U.S. and Europe.

Chemical Classes:

Abbrev	Class	Abbrev	Class
AS	ANTISEPTIC	NP	NONYLPHENOL & NP ETHOXYLATES
